

Radare2 Cheatsheet

- Radare2 Initialization

| Command | Description |
|---------------------------------------|---------------------------|
| <code>r2 ./myprogram</code> | Analyze a binary file |
| <code>r2 -d ./myprogram</code> | Debug a program |
| <code>r2 -A ./myprogram</code> | Auto-analyze on startup |
| <code>r2 -w ./myprogram</code> | Open in write mode |
| <code>r2 -p <process_id></code> | Attach to running process |

- Basic Navigation

| Command | Description |
|------------------------------------|--|
| <code>s <address></code> | Seek to address |
| <code>s+</code> | Next instruction |
| <code>s-</code> | Previous instruction |
| <code>pdf</code> | Print disassembly of current function |
| <code>pdg</code> | Print decompilation of current function using r2ghidra |
| <code>pdi @ <address></code> | Disassemble at address |
| <code>V</code> | Enter visual mode |
| <code>VV</code> | Enter visual graph mode |

- Analysis Commands

| Command | Description |
|-----------------------------------|-------------------------------------|
| <code>aaa</code> | Auto-analyze all |
| <code>af</code> | Analyze function at current address |
| <code>afl</code> | List all functions |
| <code>afn new_name</code> | Rename current function |
| <code>afvn old_var new_var</code> | Rename variable |

- Debugging Commands

| Command | Description |
|--------------------|------------------------|
| dc | Continue execution |
| dc until <address> | Continue until address |
| dcu main | Continue until main |
| ds | Step into |
| dso | Step over |
| dr | Show registers |
| dr <reg>=<value> | Set register value |

- Breakpoints & Watchpoints

| Command | Description |
|--------------|------------------------|
| db <address> | Set breakpoint |
| db sym.main | Break at main function |
| dbt | List breakpoints |
| db- <bp_num> | Remove breakpoint |
| dw <address> | Set write watchpoint |
| dr <address> | Set read watchpoint |

- Memory Operations

| Command | Description |
|-------------------------|-----------------------|
| px 64 @ <address> | Hexdump 64 bytes |
| ps @ <address> | Print string |
| pf [format] @ <address> | Print formatted data |
| w <value> @ <address> | Write value to memory |
| wo <value> @ <address> | Write overwrite |

- Binary Patching

| Command | Description |
|--------------------|-----------------------|
| wa nop @ <address> | Write NOP instruction |

| Command | Description |
|--|----------------------------|
| <code>wa jmp <target> @ <address></code> | Write jump instruction |
| <code>"wa mov eax, 0x41" @ <address></code> | Write assembly instruction |
| <code>wA <assembly> @ <address></code> | Write assembly code |

• Information & Help

| Command | Description |
|--------------------------------|--------------------------|
| <code>i</code> | Binary information |
| <code>ii</code> | Imports |
| <code>iS</code> | Sections |
| <code>iz</code> | Strings in data sections |
| <code>is</code> | Symbols |
| <code>? <command></code> | Get help for command |

• Search Operations

| Command | Description |
|--------------------------------|---------------------------------|
| <code>/ <pattern></code> | Search for bytes |
| <code>/x 41 42 43</code> | Search for hex pattern |
| <code>/i mov eax</code> | Search for assembly instruction |
| <code>/v 0xdeadbeef</code> | Search for value |
| <code>/s "hello"</code> | Search for string |

• Visual Mode Shortcuts

| Key | Action |
|-----------------|--------------------|
| <code>/P</code> | Previous/Next page |
| <code>/k</code> | Up/Down |
| <code>/l</code> | Left/Right |
| <code>:</code> | Enter command |
| <code>;</code> | Add comment |

| Key | Action |
|-----|--------------------|
| | X-refs to location |
| | Undo seek |

• Scripting & Automation

| Command | Description |
|------------------------------------|------------------------------|
| <code>. <script></code> | Execute r2 script |
| <code>#!pipe command</code> | Pipe output to shell command |
| <code>\$(command)</code> | Execute shell command |
| <code>> variable = value</code> | Set variable |
| <code>.*</code> | List all macros |

• Advanced Analysis

| Command | Description |
|------------------------------------|------------------------------------|
| <code>ag <address></code> | Generate graph of function |
| <code>agfd</code> | Generate graph of current function |
| <code>ax</code> | Find references to |
| <code>axt @ <address></code> | Find references to address |
| <code>afll</code> | List function locals |
